presents the mini-tutorial

EpsilonChat: Supervised mode and ordered mode

http://aristod.com http://epsilonwriter.com

Prerequisite:
Read before the “Live document” tutorial.

In some cases, it is better to have a leader who distributes the control on live documents. This is possible with EpsilonChat using the supervised mode.

Participants
Title
She created a conversation with these 7 contacts.
She got, at the same time, 4 live documents associated with this conversation.
As she created it, she is the leader.
She clicks here to open live document # 1 of this conversation.

Which formula allows to calculate the derivative of:
$f(x) = \frac{2x^3 - x}{x^2 + 3x - 1}$
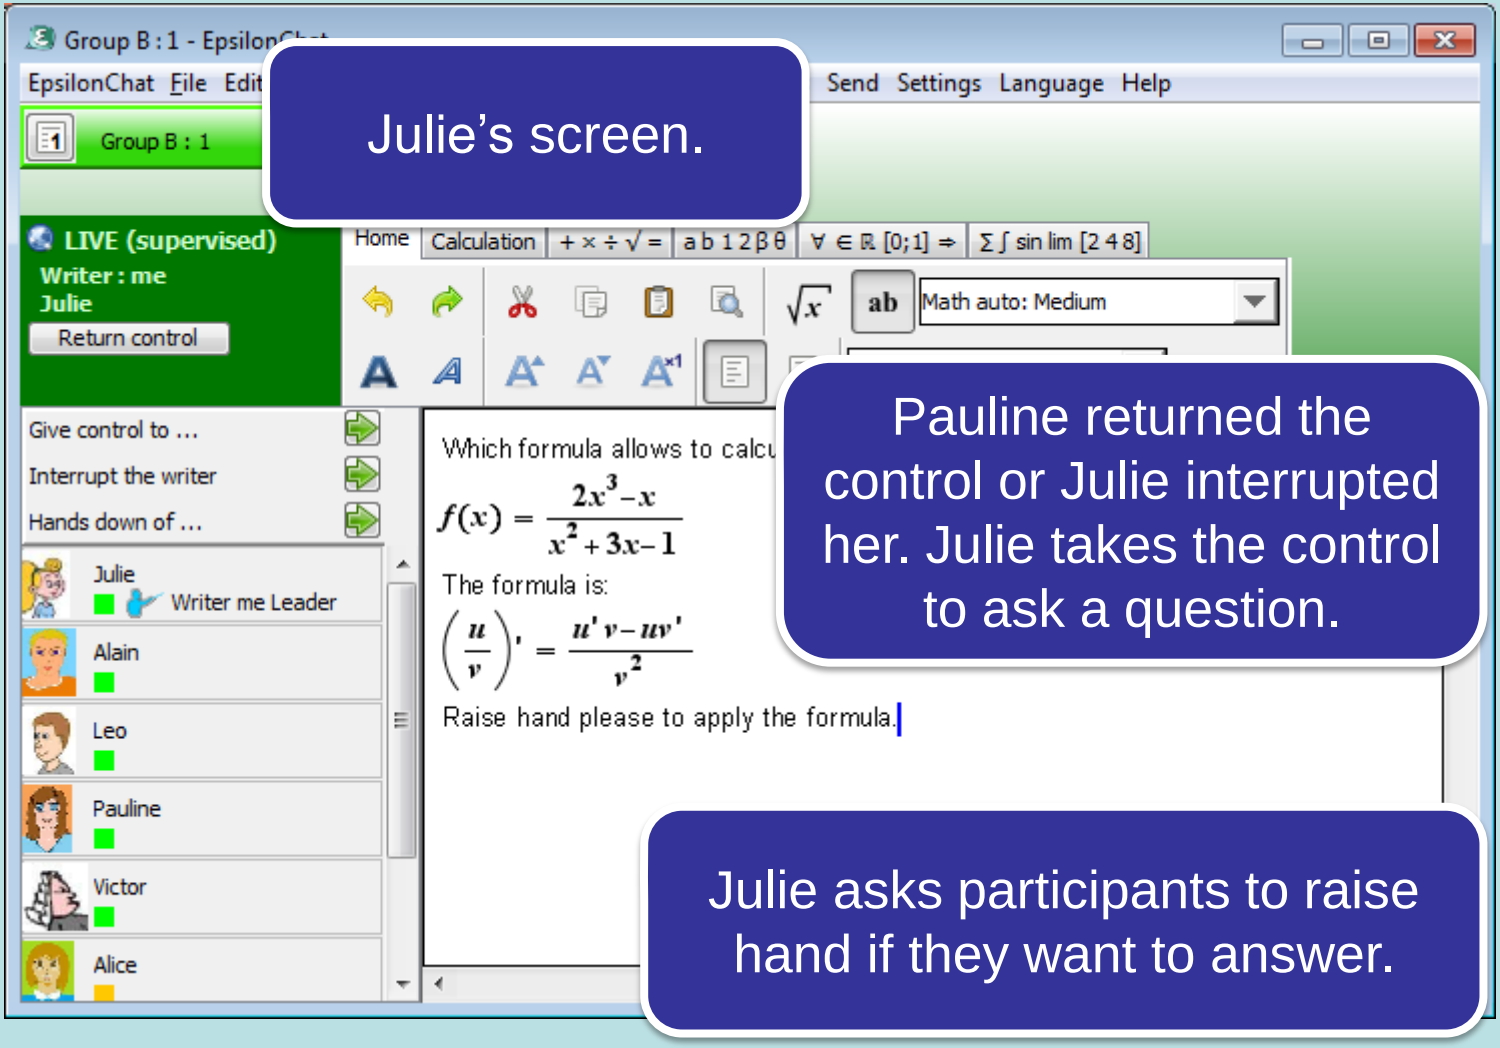
The formula is:
$\left(\frac{u}{v}\right)' = \frac{u'v - uv'}{v^2}$
Pauline answers the question.



Julie's screen.
Pauline returned the control or Julie interrupted her. Julie takes the control to ask a question.
Julie asks participants to raise hand if they want to answer.

The formula is:
Back to Julie's screen.
Victor and Pauline have raised the hand (Pauline was the first).
Julie is going to give the control to Victor so that Pauline do not monopolize all the replies.

Please note:

- A participant with a raised hand can hands down.
- The leader can trigger hands down of some or all the participants.
- The leader can give control to any participant whether the participant has hands up or not.

ORDERED MODE

The leader can choose the ordered mode instead of the free or supervised mode.
In this case, the participants should raise hand to be able to write, as in the supervised mode.
The control is given automatically by the server in the order of the requests.

Please note:

- The mode can be supervised for the live document #1 and free or ordered for the live document #2.
- Supervised and ordered modes can also be used to the chat in a conversation.

The End
